WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High Risk for Far Eastside and eastern portions of the Northern Sierra PSA's due to gusts to 35 mph and low RH through Sunday

*** W-NW Gusts to 35 mph through Coast Range Gaps and Passes into Western Sacramento Valley during afternoons and evenings through Sunday***

There will be little change in the weather through Friday as N. California remains in between high pressure over desert SW and a trough over the Pacific Northwest. Winds will be a tad breezier area wide under this type of pattern. The favored areas for widespread gustier SW-W wind of 20 and 30 mph will be found along and east of the Cascade-Sierra Crest. A secondary but localized area of gustier winds will be found across the coastal mountain gaps into the far western part of the Sacramento Valley during the afternoons and evenings through Friday night. Expect W-NW wind gusts between 20 to 35 mph across those areas. Minimum humidity will stay in the upper single digits and teens and humidity recovery will be mainly between 30% and 50% across the interior. Maximum temperatures will be in the 80s to low 90s across the mountains and 90s to 102 in the valleys.

Wind speeds will increase overall during the weekend with gusts between 30 to 35 mph favoring the Cascade-Sierra Crest eastward. Humidity values will moderate some while temperatures cool. A Pacific disturbance is expected to slide over Siskiyou and Modoc counties late Saturday and provide a slight chance of dry showers and thunderstorms.

High pressure is expected to build back into the region next week. Winds will begin to lessen overall and temperatures would increase with lower RH.

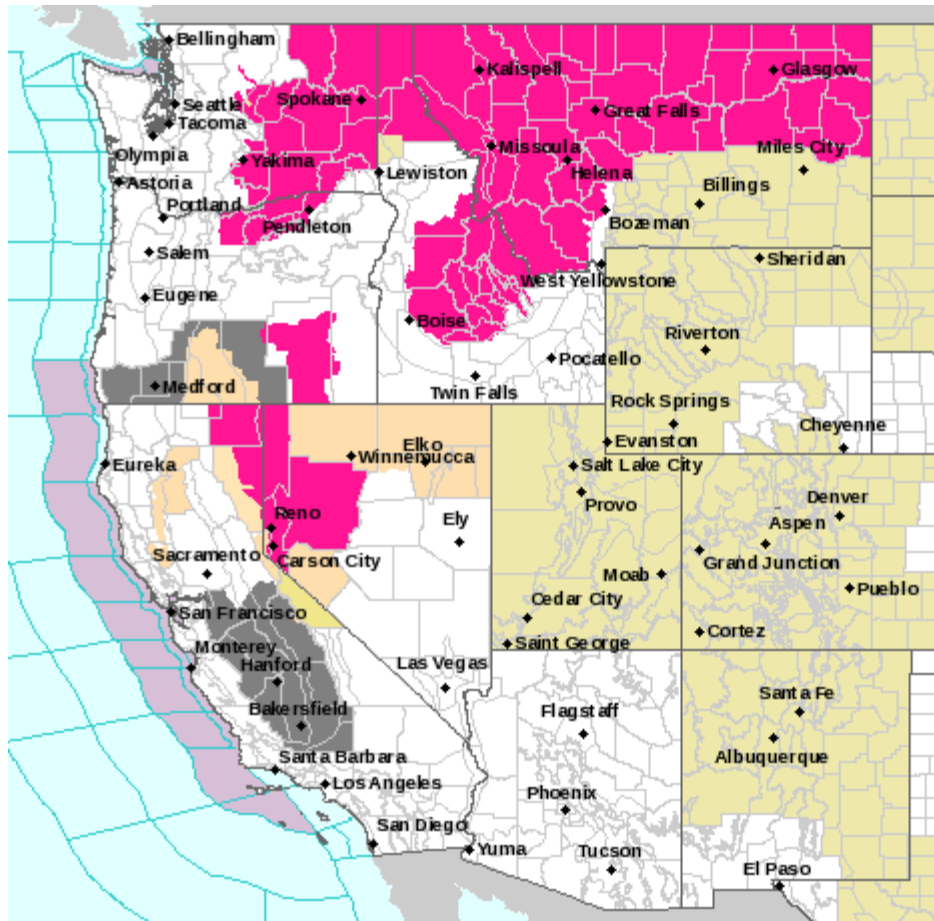

SOUTHERN CALIFORNIA

Isolated thunderstorms today, drier by the weekend

Turning breezy along the central coast, southern Santa Barbara County and Kern County Mountains Thursday

A slight adjustment of the upper level pattern will bring a change to a breezy and slightly cooler pattern for the weekend. The high pressure ridge which has brought hot weather for several weeks will be suppressed southward which will allow northwesterly, onshore flow to develop Friday into the weekend. This will allow temperatures to fall from the upper 90s to 105 degree range in the valleys today to the mid 90s by Saturday. Northwest winds of 15-25 mph will develop each afternoon Friday through Monday along the central coast as well as the Kern County Mountains where some gusts to 40 mph will be possible Friday afternoon. Some north winds of 10-20 mph will be possible in Santa Barbara County tonight and again Friday night. Isolated thunderstorms will occur today in the Sierras as well as the San Bernardino and Cleveland National Forests this afternoon. After today, no thunderstorms are expected until the middle of next week. The marine layer will be a bit more widespread over the weekend, but warm sea surface temperatures will keep marine layer inversions weak and quick to mix out in the morning. Further inland, expect RH to fall into the teens above 2,500 feet each afternoon Friday into early next week. Long range models indicate warmer weather will return next Tuesday with wet thunderstorms possibly arriving later in the week.
